Objective and Investment Policy

This Sub-Fund is passively managed. The objective of this Sub-Fund is to track the performance of MIB ESG Index, and to minimize the tracking error between the net asset value of the Sub-Fund and the performance of the Index. The anticipated level of the tracking error, under normal market conditions, is indicated in the prospectus of the Sub-Fund. The index is a Total Return Index : the dividends paid by the index constituents are included in the Index return. The Index is an equity index based on the 40 most liquid and capitalised Italian shares listed on Euronext Milan MTA and MIV markets. (the "Eligible Universe"). The Index excludes companies from the Eligible Universe based on environmental, social or governance criteria and targets a minimum 30% reduction in carbon emission intensity relative to this universe and an improved ESG Score compared to the Eligible Universe. The Index applies exclusions to companies involved in activities considered non-aligned with the Paris Climate Agreement (coal extraction, oil, etc). Those exclusions are provided for in Art. 12 (1) (a)-(g) of the Commission Delegated Regulation (EU) 2020/1818 of 17 July 2020 supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council as regards minimum standards for EU Climate Transition Benchmarks and EU Paris-aligned Benchmarks, please refer to the "Guidelines on funds' names using ESG or sustainability-related terms" section of the Prospectus. The limits of the approach adopted are described in the Sub-Fund's prospectus through risk factors such as Sustainable investment risk. The ESG score of companies is calculated by an ESG rating agency, using raw data, models and estimates collected/calculated using methods specific to each provider. Due to the lack of standardisation and the uniqueness of each methodology, the information provided may be incomplete. Assessment of sustainability risks is complex and may be based on ESG data which is difficult to obtain, incomplete, estimated, out of date and/or otherwise materially inaccurate. Even when identified, there can be no guarantee that these data will be correctly assessed. The Index applies exclusions to companies involved in activities considered non-aligned with the Paris Climate Agreement (coal extraction, oil, etc.). For further information on the exclusions applied by the Index pursuant to the EU Paris-aligned Benchmarks (PAB), please refer to the "Guidelines on funds' names using ESG or sustainability-related terms" section of the Prospectus. FTSE MIB Index is an equity index representative of 40 leading securities traded in the Italian markets. More information about the composition of the index and its operating rules are available in the prospectus and at: www.ftserussell.com The Index value is available via Bloomberg (MIBESG NR). The exposure to the Index will be achieved through a direct replication, mainly by making direct investments in transferable securities and/or other eligible assets representing the Index constituents in a proportion extremely close to their proportion in the index. The Investment Manager will be able to use derivatives in order to deal with inflows and outflows and also if it allows a better exposition to an Index constituent. In order to generate additional income to offset its costs, the Sub-Fund may also enter into securities lending operations.

Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.
